Fedora User Group Meeting 2015
Chicago, IL
October 22, 2015
We want to optimize discoverability and dissemination of content and enhance the impact of FSM, NUCATS, and our Northwestern Medicine community.
DigitalHub - Vision Statement

DigitalHub facilitates the discovery and recognition of research and scholarship at Northwestern Medicine by bringing together, in one place, open access to research, both traditional and non-traditional, and information on scholarly activities across all disciplines. Populated with institutional and public data sources, DigitalHub represents a living record of scholarly output.
Custom work

In Sufia

- Integration with LDAP
- Name verification in LDAP
- Link to Northwestern Medicine VIVO
- Files are public only after 5 req fields are filed
- Parent-child dependencies
- Ability to make collections members of other collections
- Ability to set permissions on collections
- Controlled vocabularies
- LOD vocabularies
- And much more …

Sinhalese ola written in Pali ca. 1760 CE (closed)

Ola (palm-leaf manuscript) written in Pali around 1760 AD. About 250 years old, this ola contains information on medical care for conditions for eyes and nose. It prescribes recipes for snuffs for catarrhs, ointments and pastes for eye diseases, and decoctions and powders for nasal and eye diseases. The binding cord, ivory carved medallion, and lacquered wood covers are modern, made in Ceylon by native artists after ancient models. [Donated by Dr. Casey Wood, 1934. Photo by James B. Brucker, 2005.] PHOTO Credit line should read: "Courtesy of the Galter Health Sciences Library Special Collections, Feinberg School of Medicine, Northwestern University, Chicago, Ill."

Special Collections: photos from the vault

Photographs of historical and/or institutional interest from Northwestern University Galter Health Sciences Library's Special Collections.
